

JLT CLAMPS

GLUE APPLICATORS

JLT PLATE SPREADER
MODELS #138B & #150B

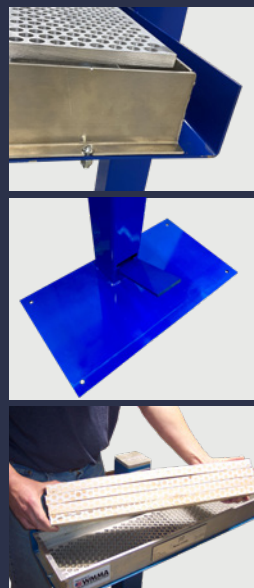

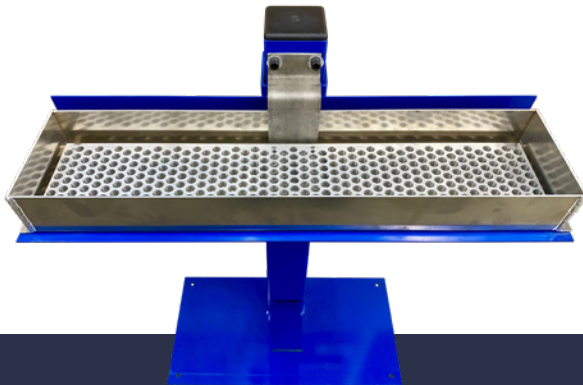

- Simple mechanical operation
- Many times faster than manual glue application
- Longer boards can be easily coated

SPECIFICATIONS:

- Aluminum grid
- Spray bottle & cover for overnight storage
- Efficient honeycomb pattern glue spread

#150B REDI-SPREADER

6" wide x 27" long, 1-1/2 gallon capacity

Operation

Simply step down on the foot treadle and the grid is raised up and out of the glue. The edges of the boards are placed on the grid for a precise and even glue spread. Then the operator slowly removes pressure from the treadle and the grid drops back into the pan.

#138B PLATE SPREADER

8" wide x 48" long, 5 gallon capacity
(Optional lengths 60", 72" & 96")

Operation

The operator simply steps down on the foot treadle and the glue pan drops down revealing the glue coated grid. The edges of the boards are then placed on the grid and the precise glue pattern is transferred to the board (NOTE: They can be dipped twice for longer lengths). Once the operator removes pressure from the treadle the extension springs will return the glue pan submerging the grid back into the glue.
